[Université de Sherbrooke](#)

Accredited sites

Accredited sites are used for residency training programs, that is, for the mandatory or elective training periods that are completed on a regular basis by most residents in the program. Only accredited sites are listed in the [List of accreditations](#).

For more information, go to the [Accreditation page](#).

Other accredited sites where professional activities are performed by residents and fellows during their training

Training sites where professional activities are performed under the supervision of competent individuals in the following contexts are accredited:

- Land or air ambulance transport
- House calls (including providing care to the homeless)
- Organ removal performed in any institution other than the institution where the resident or fellow is completing their training period
- Simulation centres

Interinstitutional affiliations

An interfaculty agreement has been established for some programs. The four faculties share training sites for two network programs, namely, medical biochemistry and geriatric medicine.

For more information, contact the faculty of medicine concerned.

Other programs

The training sites for the pediatric specialties listed below are affiliated with the corresponding general program that leads to Collège certification:

Pediatric specialties	General program
Pediatric cardiology	Cardiology
Pediatric endocrinology and metabolism	Endocrinology and metabolism
